GitHub Integration

When committing in GitHub with a special commit message the task in MeisterTask is completed automatically and a link back to the commit is attached to the task

[hide details](#)

Installation Instructions

You first need to authorize MeisterTask to access your GitHub account. After choosing a repository you can complete tasks and checklist items just by adding the MeisterTask **task token** (the alphanumeric code in the task URL) to your commit messages in GitHub. Checklist items are referenced by number, starting with 1.

Please note: Make sure all people have the same email addresses on MeisterTask and GitHub. You need admin rights on the repository to install the integration.

Completing a task / checklist items

Commit message `#taskToken[:checklist item]`

Examples

Removes nasty bug `#d1M76W4j`

Removes nasty bug `#d1M76W4j:1`
